CS-150L Computing for Business Students Lab 5: Date Functions and Currency Conversion

Instructor:
Joel Castellanos
e-mail: barrick@cs.unm.edu
www.cs.unm.edu/~barrick
Office: Farris Engineering
Center (FEC) room 106

## Upcoming Schedule

- Week of Feb 22: Lab 5 Date Functions and Currency Conversion.

■ Week of March 1: Lab 6: Excel charts

- Week of March 8: Midterm Exam:
- Taken during lab class
- Covers labs 4, 5, and 6.
- Practice exam in textbook.
- Lecture: Tuesday (Wednesday night) Review
- Lecture: Thursday: No Class.

■ Week of March 15: Spring Break

- Week of March 22: Lab 7 - Loan Amortizations Schedules.
- When you register your i-Clicker on line, DO NOT USE YOUR UNM ID (i.e. 101135341).

## ■ YOU MUST USE YOUR UNM NetID (joel@unm.odu)

■ After this weekend, grades for quizzes $1 \& 2$ are closed.

- When you forget or have a problem with your clicker:
- You can borrow one of mine - first come first serve.
- You cannot borrow mine repeatedly.

If you borrow, you MUST e-mail me, barrick@cs.unm.edu, THAT SAME DAY!

- Subject: CS-150: borrowed clicker.
- Body: Clicker Animal (frog, snake, owl, or fish)

## Lab 5: Excel

■ TODAY(),

- EOMONTH(),
- WEEKDAY(),

■ Date Formatting (including custom dddd),
$\square$ Date Arithmetic,

- Web Queries,
- Currency Conversion,

■ Simple Interest,

- Balance Calculation.

## It lost my Workbook Tabs!

## Clicking Around

## Quiz: Weighted Average

|  | A | B | C | D | E |
| :--- | :--- | ---: | ---: | ---: | ---: |
| 1 | Name | Lab 1 | Lab 2 | Exam | Grade |
| 2 | Michael Stipe | 90 | 95 | 95 |  |
| 3 | Peter Buck | 90 | 97 | 85 |  |
| 4 | Mike Mills | 92 | 99 | 75 |  |
| 5 | Bill Berry | 95 | 98 | 65 |  |
| 6 |  |  |  |  |  |
| 7 | Weight |  |  |  |  |
| 8 | Total Weight |  |  |  |  |

Which equation can be filled down from cell E2, to correctly calculate the weighted average in cells E2:E5?
a) $=\left(\left(\$ B \$ 2^{*} \$ B \$ 7\right)+\left(\$ C \$ 2^{*} \$ C \$ 7\right)+\left(\$ D \$ 2^{*} \$ D \$ 7\right)\right) / \$ B \$ 8$
b) $=\left(\left(\$ \mathrm{~B} \$ 2^{*} \$ \mathrm{~B} \$ 7\right)+\left(\$ \mathrm{C} \$ 2^{*} \$ \mathrm{C} \$ 7\right)+\left(\$ \mathrm{D} \$ 2^{*} \$ \mathrm{D} \$ 7\right)\right) / \mathrm{B} 8$
c) $=\left(\left(\$ \mathrm{~B} \$ 2^{*} \mathrm{~B} 7\right)+\left(\$ \mathrm{C} \$ 2^{*} \mathrm{C} 7\right)+\left(\$ \mathrm{D} \$ 2^{*} \mathrm{D} 7\right)\right) / \mathrm{B} 8$
d) $=\left(\left(\mathrm{B} 2^{*} \$ \mathrm{~B} \$ 7\right)+\left(\mathrm{C} 2^{*} \$ \mathrm{C} \$ 7\right)+\left(\mathrm{D} 2^{*} \$ \mathrm{D} \$ 7\right)\right) / \$ \mathrm{~B} \$ 8$
e) $=\left(\$ \mathrm{~B} \$ 2^{*} \mathrm{~B} 7\right)+\left(\$ \mathrm{C} \$ 2^{*} \mathrm{C} 7\right)+\left(\$ \mathrm{D} \$ 2^{*} \mathrm{D} 7\right) / \mathrm{B} 8$

## Currency Formatting

## Currency Formatting - Symbol

## Excel Date - Serial Number

- Microsoft Excel stores dates as sequential serial numbers so they can be used in calculations.
- By default, January 1, 1900 is serial number 1. Thus, if you format a cell that contains the value 2 as a date, then the cell will display $1 / 2 / 1900$.

| C 1 |  |  | $f_{x}=\mathrm{A} 1+\mathrm{B} 1$ |
| :---: | :---: | :---: | :---: | :---: |
|  | A | B | C |
| 1 | 1 | 1 | Monday, January 02,1900 |

■ January 1, 2008 is serial number 39448 because it is 39,448 days after January 1, 1900.

- Microsoft Excel for the Macintosh uses a different date system as its default.

## Date Arithmetic

|  | B3 | $\mathrm{f}_{x}=\mathrm{A} 3-\mathrm{A} 2$ |
| :---: | :---: | :---: |
|  | A | B |
| 1 | Date |  |
| 2 | June 1, 2008 |  |
| 3 | July 1, 2008 | 30 |
| 4 | August 1, 2008 |  |
| 5 | September 15, 2008 |  |

Formula using cells that contain dates.

- Excel knows about months with 30 days, 31 days and leap years.
$\square$ What is the value of A5-A4?
- Reads the local computer's system clock and returns the Excel Serial Number.

## WEEKDAY(serial_number)

- Returns the day of the week corresponding to a given date.
$\square$ The day is given as an integer, ranging from 1 (Sunday) to 7 (Saturday)
- To see the actual day names, use custom formatting ddd or dddd.

## EOMONTH(start_date, number_of_months)

Returns the serial number for the last day of the month that is number_of_months after start_date.

| $=$ EOMONTH("2/15/2008", 0) | $\rightarrow$ | $2 / 29 / 2008$ |
| :--- | :--- | :--- | :--- |
| $=E O M O N T H(" 2 / 15 / 2008 ", ~ 1) ~$ | $\rightarrow$ | $3 / 31 / 2008$ |
| $=E O M O N T H(1,1)$ | $\rightarrow$ | $2 / 28 / 1900$ |
| $=E O M O N T H(2 / 15 / 2008,1)$ | $\rightarrow$ | $2 / 28 / 1900$ |

|  | B1 | $f_{x}=\operatorname{EOMONTH}(\mathrm{A} 1,0)$ |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | A | B | c | D |
| 1 | 2/22/2009 | 2/28/2009 |  |  |

## EOMONTH() \#NAME?

If this function is not available, and returns the \#NAME? error, install and load the Analysis ToolPak add-in:

1. On "Tools" menu, $\rightarrow$ "Add-ins".
2. In the "Add-ins" available list, select the "Analysis ToolPak" box, and click OK.

## Quiz: EOMONTH

Which of the following will fill down from cell A2 through cell A6 to produce the $1^{\text {st }}$ of each successive month?
a) $=\operatorname{EOMONTH}(\mathrm{A} 1,1)$
b) $=\operatorname{EOMONTH}(\mathrm{A} 2: \mathrm{A} 6,1)$
c) $=\operatorname{EOMONTH}(\mathrm{A} 1: \mathrm{A}, 1)$
d) $=\operatorname{EOMONTH}(\mathrm{A} 1,0)+1$
e) $=\operatorname{EOMONTH}(15, \mathrm{~A} 1)$

|  | A | B |
| :---: | :---: | ---: |
| 1 | 15-Mar-08 |  |
| 2 | $=$ |  |
| 3 |  |  |
| 4 |  |  |
| 5 |  |  |
| 6 |  |  |
| 7 |  |  |
| 8 |  |  |
| 9 |  |  |

## Quiz: EOMONTH

If the value in cell A1 is $1 / 1 / 2008$, which of the following will fill down from cell A2 through cell A6 to produce the $1^{\text {st }}$ of each successive year?

$$
\begin{aligned}
& \text { a) }=\mathrm{EOMONTH}(\mathrm{~A} 1,0)+365 \\
& \mathrm{~b})=\mathrm{EOMONTH}(\mathrm{~A} 1,11)+365 \\
& \text { c) }=\mathrm{EOMONTH}(\mathrm{~A} 1,11)+1 \\
& \text { d) }=\mathrm{A} 1+365 \\
& \text { e) }=\mathrm{EOMONTH}(\mathrm{~A} 1,365)
\end{aligned}
$$

## Simple Interest

Interest $=$ Principal * Periodic Rate * Number of Periods
If $\$ 100$ was borrowed for 2 years at an annual periodic interest rate of $10 \%$, the simple interest would be:

$$
\begin{aligned}
& \$ 100 \text { * } 10 \% \text { * } 2 \text { periods }=\$ 20 . \\
& \$ 100 *(10 / 100){ }^{*} 2=\$ 20 .
\end{aligned}
$$

If $\$ 100$ was borrowed for 5 months at a monthly periodic interest rate of $1.00 \%$, the simple interest would be:

$$
\begin{aligned}
& \$ 100 * 1.0 \% * 5 \text { periods }=\$ 5 . \\
& \$ 100 *(1.0 / 100) * 5=\$ 5 .
\end{aligned}
$$

Simple interest is generally charged for borrowing money for short periods of time.

## Simple Interest - more examples

Interest = Principal * Periodic Rate * Number of Periods
If $\$ 100$ was borrowed for 5 months at a annual periodic interest rate of $10.0 \%$, the simple interest would be:

$$
\begin{aligned}
& \$ 100 * 10.0 \% \text { * }(5 / 12) \text { periods }=\$ 4.17 . \\
& \$ 100{ }^{*}(1.0 / 100){ }^{*} 0.4167=\$ 4.17 .
\end{aligned}
$$

If $\$ 100$ was borrowed for 228 days at a annual periodic interest rate of $10.0 \%$, the simple interest would be:

$$
\begin{aligned}
& \$ 100 \text { * } 10.0 \% \text { * }(228 / 365) \text { periods }=\$ 6.24 . \\
& \$ 100 \text { * }(1.0 / 100)^{*} 0.6247=\$ 6.24 .
\end{aligned}
$$

## Compound Interest

The account balance (interest plus principal) is calculated at the end of each period.
During the next period, interest is calculated on the full balance at the end of the last period.

If $\$ 100$ was borrowed for 2 years at an annual periodic interest rate of $10 \%$, the interest compounded annually would be:

$$
\$ 100 \text { * } 10 \% \text { * } 1 \text { period = } \$ 10 \text { (in the 1st period). }
$$

Balance at the end of the first period: $\$ 100+\$ 10=\$ 110$.

$$
\$ 110 \text { * } 10 \% \text { * } 1 \text { period }=\$ 11 \text { (in the } 2^{\text {nd }} \text { period). }
$$

Thus, the total interest in the loan is:

$$
\$ 10.00+\$ 11.00=\$ 21.00
$$

## Simple verses Compound Interest

Simple Interest:
Future Value = Principal +
Principal $\times$ Periodic Rate $\times$ Number of Periods

$$
\$ 100+\$ 100 * 10 \% * 2 \text { years }=\$ 120.00
$$

Compound Interest:
Future Value =
Principal $\times(1+\text { Periodic Rate })^{\text {Number of Periods }}$

$$
\$ 100 \times(1+10 \%)^{2}=100^{*}(1+10 \%)^{\wedge} 2=\$ 121
$$

## Annual Percentage Rate \& Yield

- APR (Annual Percentage Rate) is the annual rate of interest without taking into account the compounding of interest within that year.

■ APY (Annual Percentage Yield) does take into account the effects of intra-year compounding.

- For example, a credit card company might charge $2 \%$ interest each month.
- APR $=24 \%$ ( $2 \% \times 12$ months).
- APY $=(1+0.02)^{12}-1=26.82 \%$

## Credit Card Interest

Credit cards usually charge simple interest for each day with in the month, and compound interest between months.

For example:

- A credit card that charges 27.99\% APR.

■ The Daily Periodic Rate $=27.99 \% / 365=0.0786 \%$

- During a month with 29 days, your interest is:

$$
\text { balance * } 0.0786 \% \text { * } 29 \text { days }
$$

- At the end of the month, this interest is added into the balance.

## Quiz: Interest

|  | A |  | B | C |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Daily Periodic Interest Rate: | D |  |  |
| 2 |  |  |  |  |
|  | Number |  |  |  |
| 3 | of Days | Balance | Interest |  |
| 4 | 41 | $\$ 1,257.52$ |  |  |
|  |  |  |  |  |

The simple interest in cell C4 can be calculated by which equation?
a) $=\$ D \$ 1 * B 4$
b) $=\$ \mathrm{D} \$ 1 * \mathrm{~B} 4+\mathrm{A} 4$
c) $=\$ \mathrm{D} \$ 1+\mathrm{B} 4^{*} \mathrm{~A} 4$
d) $=\$ \mathrm{D} \$ 1+\mathrm{A} 4^{*} \mathrm{~B} 4$
e) $=\$ D \$ 1^{*} A 4^{*} B 4$

## Quiz: Order of Operations

Which of the following equations calculate the same value as $=A 1+A 2^{*} A 3-B 1 / B 3$ ?

$$
\text { 1) }=\left(\mathrm{A} 1+\mathrm{A} 2^{*} \mathrm{~A} 3-\mathrm{B} 1\right) / \mathrm{B} 3
$$

$$
\text { 2) }=\mathrm{A} 1+\left(\mathrm{A} 2^{*} \mathrm{~A} 3\right)-(\mathrm{B} 1) / \mathrm{B} 3
$$

$$
3)=A 1+\left(A 2^{*} A 3\right)-(B 1 / B 3)
$$

a) Just 1
d) $1 \& 2$
b) Just 2
e) $2 \& 3$
c) Just 3

## Account Balance

|  | A | B | C | D | E | F |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  | APR | Daily Rate |  |
| 2 |  |  |  | $7.00 \%$ | $0.0192 \%$ |  |
| 3 | Date | Days | deposit | Withdraw | Interest | Balance |
| 4 | $01 / 01 / 08$ |  | $1,000.00$ | $(3,000.00)$ |  | $(2,000.00)$ |
| 5 | $01 / 01 / 09$ | 366 | 270.00 | $(1,500.00)$ | $(140.38)$ |  |
| 6 | $01 / 01 / 10$ | 365 | 270.00 |  | $(235.93)$ | $(3,336.31)$ |
| 7 | $01 / 01 / 11$ | 365 | 270.00 |  | $(233.54)$ | $(3,299.85)$ |
| 8 | $01 / 01 / 12$ | 365 | 270.00 |  | $(230.99)$ | $(3,260.84)$ |
| 9 | $01 / 01 / 13$ | 366 | 270.00 |  | $(228.88)$ | $(3,219.73)$ |
| 10 | $01 / 01 / 14$ | 365 | 270.00 |  | $(225.38)$ | $(3,175.11)$ |

■ Since the withdraw amounts and interest amounts are negative numbers, they are added to the balance.

## Quiz: Account Balance

|  | A | B | C | D | E |
| :---: | :---: | ---: | ---: | ---: | ---: |
| 1 | Date | Purchases | Payments | Finance <br> Charge | Balance |
| 2 | 12-Jan | $(\$ 525.00)$ |  |  | $(\$ 525.00)$ |
| 3 | 12-Feb | $(\$ 729.00)$ | $\$ 200.00$ | $(\$ 26.25)$ | $(\$ 1,080.25)$ |
| 4 | 12-Mar | $(\$ 433.00)$ | $\$ 200.00$ | $(\$ 54.01)$ | $(\$ 1,367.26)$ |
| 5 | 12-Apr | $(\$ 1,002.00)$ | $\$ 200.00$ | $(\$ 68.36)$ | $(\$ 2,237.63)$ |

Which equation will produce the correct value in cell E3?
a) $=\mathbf{E} 3+\boldsymbol{B} 3+\mathbf{C} 3+D 3$
b) $=E 2+B 3+C 3+D 3$
c) $=\mathrm{E} 3+\mathrm{B} 2+\mathrm{C} 2+\mathrm{D} 2$
d) $=E 3-B 3+C 3+D 3$
e) $=\boldsymbol{E} \mathbf{2}-\mathrm{B} 3+\boldsymbol{C} 3-\mathrm{D} 3$

## Quiz: Account Balance

|  | A | B | C | D <br> Finance <br> Charge | E |
| ---: | :---: | ---: | ---: | ---: | ---: |
| 1 | Dalance |  |  |  |  |

Which equation entered in cell E3 can be correctly filled down to cell E5?
a) $=\boldsymbol{E} 2+\mathrm{B} 3+\mathrm{C} 3+\mathrm{D} 3$
b) $=\mathbf{S E} \mathbf{\$} 2+B 3+C 3+D 3$
c) $=\mathrm{E} 2+\$ \mathrm{~B} \$ 3+\mathrm{C} 3+\mathrm{D} 3$

## Constants

■ !Throughout this exam, no equations may include "hard coded" assumptions (CONSTANTS). As usual, this prohibition does not apply to universal constants such as using " 7 " for the number of days in a week, nor " 1 " as a unit increment.

Converting a number to a percentage by dividing by 100 , is a perfectly fine use of a constant. The 100 does not need to be placed in a cell and referenced as would an interest rate or a salary.

## Quiz: Interest

|  | A |  | B | C |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Daily Periodic Interest Rate: | D |  |  |
| 2 |  |  |  |  |
|  | Number |  |  |  |
| 3 | of Days | Balance | Interest |  |
| 4 | 41 | $\$ 1,257.52$ |  |  |
|  |  |  |  |  |

The simple interest on the balance in cell B4 over a period of days given in cell A4 can be calculated by?
a) $=\$ \mathrm{D} \$ 1 * \mathrm{~B} 4$
b) $=\$ \mathrm{D} \$ 1+\mathrm{B} 4+\mathrm{A} 4$
c) $=\$ \mathrm{D} \$ 1^{*} \mathrm{~B} 4^{*} \mathrm{~A} 4$
d) $=\$ \mathrm{D} \$ 1+\mathrm{B} 4^{*} \mathrm{~A} 4$
e) $=\$ \mathrm{D} \$ 1 * \mathrm{~B} 4+\mathrm{A} 4$
