Fundamentals
Quiz 2
Primitive Data

Brooke Chenoweth

University of New Mexico

Spring 2024

Question 1

What is a data type?

- A The part of the CPU that does arithmetic.
- B A part of main memory used to store data.
- C A particular scheme for representing values with bit patterns.
- D The collection of variables that a program uses.

Question 1

What is a data type?

- A The part of the CPU that does arithmetic.
- B A part of main memory used to store data.
- C A particular scheme for representing values with bit patterns.**
- D The collection of variables that a program uses.

Question 2

What is a Java primitive data type?

- A A method for representing values that is so useful that it is a fundamental part of the language.
- B A crude form of representing numbers.
- C The part of Java that is the same as in older languages.
- D A data type that cannot be used as part of an object.

Question 2

What is a Java primitive data type?

- A A method for representing values that is so useful that it is a fundamental part of the language.
- B A crude form of representing numbers.
- C The part of Java that is the same as in older languages.
- D A data type that cannot be used as part of an object.

Question 3

Which of the following is *not* the name of a Java primitive data type?

- A int
- B float
- C double
- D String

Question 3

Which of the following is *not* the name of a Java primitive data type?

- A int
- B float
- C double
- D String

Question 4

Say that a particular item of data does *not* use a primitive data type. What must it be?

- A An object.
- B A number.
- C A literal.
- D A boolean.

Question 4

Say that a particular item of data does *not* use a primitive data type. What must it be?

- A An object.
- B A number.
- C A literal.
- D A boolean.

Question 5

Can character data be stored in computer memory?

- A No—computers can only store numbers.
- B No—computer memory can only store patterns.
- C Yes—characters are stored in special memory.
- D Yes—a primitive data type is used to store characters.

Question 5

Can character data be stored in computer memory?

- A No—computers can only store numbers.
- B No—computer memory can only store patterns.
- C Yes—characters are stored in special memory.
- D Yes—a primitive data type is used to store characters.**
